#### INTRODUCTION TO THE THEORY OF BLACK HOLES

INTRODUCTION TO THE THEORY OF BLACK HOLES been found that black holes much lighter than this "Chandrasekhar limit" exist anywhere in the Universe Does this mean that much lighter black holes cannot exist? It is here that one could wonder about all those fundamental assumptions that underly the theory of quantum mechanics, which is the basic framework on which all atomic and sub-atomic

#### **Black hole chemistry: thermodynamics with Lambda**

such as the Schwarzschild black hole, the surface gravity is the force exerted at infinity that is required to keep an object of unit mass at the horizon 5 Hawking's proof applies to black hole spacetimes that satisfy certain reasonable assumptions, namely, that the

#### **Thermodynamics of black holes in anti-de Sitter space**

however some important differences from the asymptotically flat case A black hole in anti-de Sitter space has a minimum temperature which occurs when its size is of the order of the characteristic radius of the anti-de Sitter space For larger black holes the red-shifted temperature measured at infinity is greater

### **1.3 Accretion power in astrophysics**

this is the “radius” of a black hole relevant for accretion ( the particle motion changes abruptly near  $R_{LSO}$  from a slow inspiral to a fast plunge)  $LSO = 3 \times (3 \times M/M_{\odot}) = 27 \text{ km}$  for  $3 M/M_{\odot}$  BH Accretion Let us compute the total available energy Considering a proton falling in from infinity, we can write (Longair p 134)  $G M m r^{-1/2} m v^2 \text{ free-fall} =$  When the matter reaches the surface of

### **Spinning at Infinity**

the middle phase, when the black holes are within a few radii of each other, the solutions must be obtained numerically The solutions are made feasible by cleverly changing coordinates and keying the number of data points to the significance of the region One discovery from these latest simulations is that some collisions are

### **No-Hair Theorem for Black Holes in Astrophysical Environments**

Moreover, the potential discovery of a binary system containing a black hole promises headway for characterizing black holes either via pulsar timing if the companion is a pulsar or via the detection of gravitational waves Since the no-hair theorem dictates in the rotating case that the quadrupole moment of a black hole is determined
